Do walkthroughs of tasks using the prototype we going to build on top of. Make note of what doesn't work.

**ALSO we will refer to prototype 1 for the prototype that was done for task 1.
Prototype 2 for the one done for task 2. Etc etc.

Task 1:
- OK

Task 2:OK

Task 3: OK

Task 4:
- No way to look up recipes just on duration

Task 5:
- Prototype doesn't show a Recipe Info page. The arrow on this page should be labeled with "BEGIN"
- Prototype doesn't show the ingredients list w/ tickable boxes. Also, need to show buttons to the left of each ingredient that contain its measurement + units that user can change.
- Every step screen should have a ← and → arrows at the bottom.

Task 6:
- Current prototype does not handle writing your own recipes
- Current prototype does not handle sharing recipes
    - Can add Mehnaz's Solution for this
    - I think share/add recipes should be handled in cookbook though

Task 7:
- Can't scale portion size
    - Add scale portion size onto food profile page from Prototype #7 ver 2.
- Don't have option to substitute foods
    - Being able to substitute ingredients from food profile page from Prototype #7 ver 2.
    - Will there be a timer on the step by step interactions? Wasn't handled in the task for presentation
- Don't have option to modify recipe
    - Add this option after completion of a recipe and at the food profile page. Should be added to "personal recipes" after saved (won't be saved on the public space)
-
